SuppBuddy

The pocket lab for your supplements

Akshay · Kevin · Will · David · Trevor · James

You Can’t Check What's in the Bottle, Till Now

776

supplements found with hidden drugs over 10 years, and that's only the ones the FDA caught

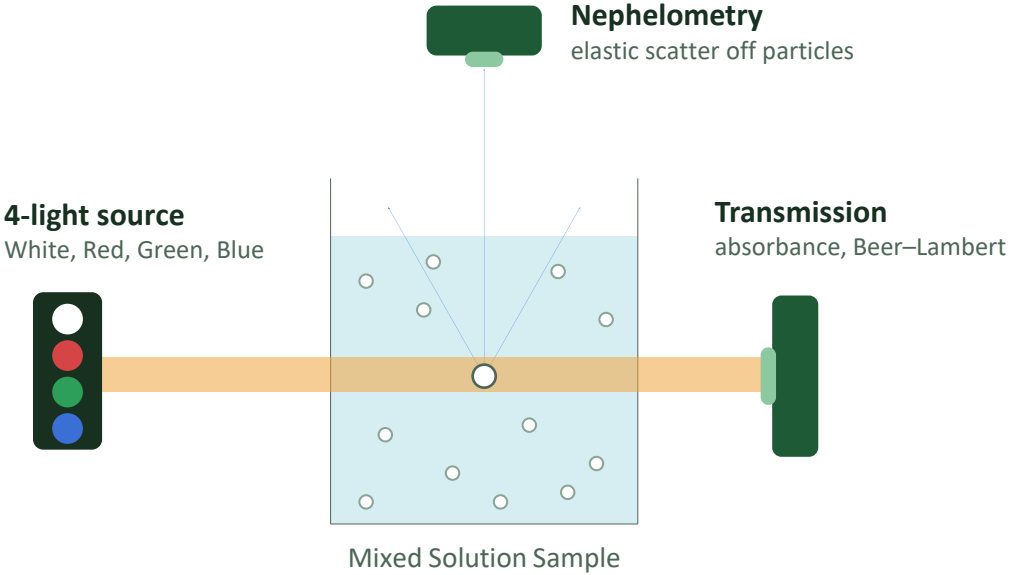

JAMA Network Open, 2018 (FDA data, 2007 to 2016)

No FDA approval before sale

Fillers and contamination are invisible to the human eye

Lab tests are too expensive

Compound Fingerprinting

Spectral absorbance from transmission

Each compound absorbs its own mix of wavelengths (Beer–Lambert), providing a compound fingerprint.

Turbidity from 90° scatter

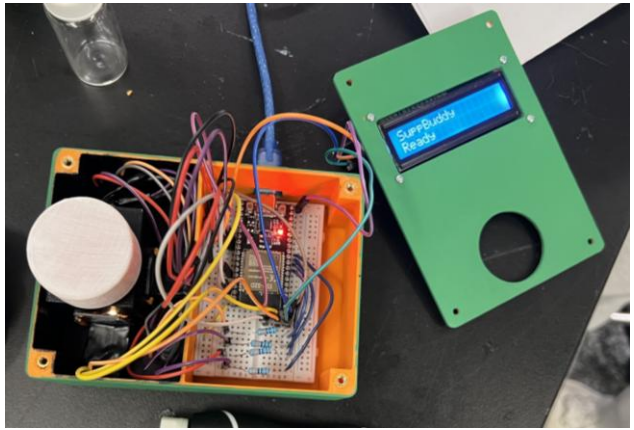

True solutions barely scatter, but suspended solids do, even after mixing.

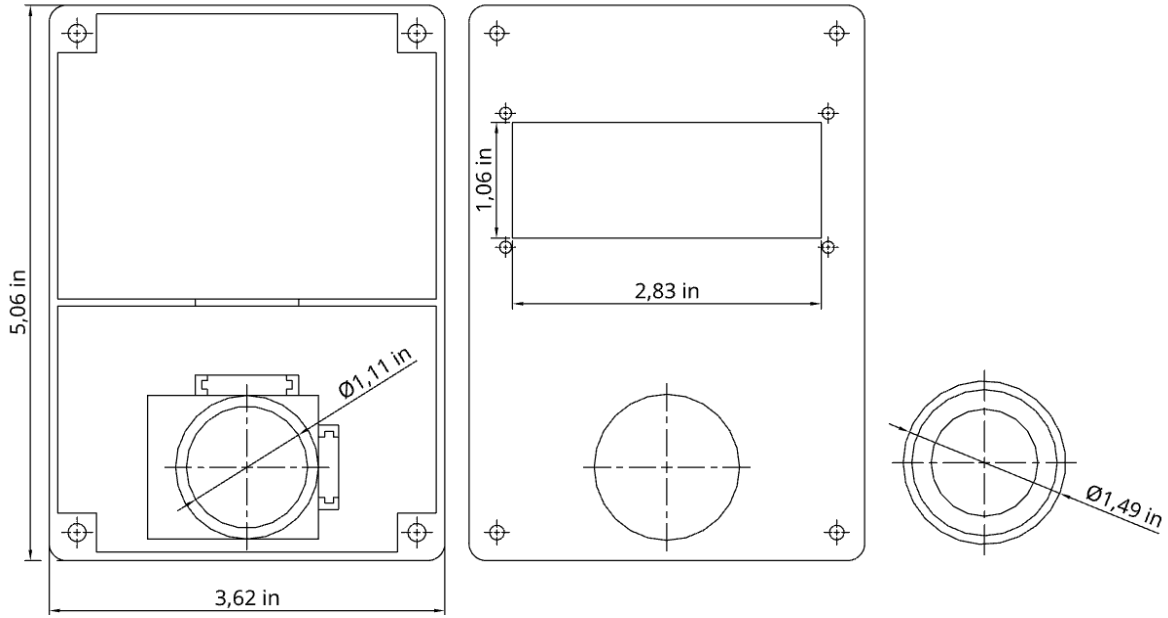

Particle size from scatter vs. color

Particles smaller than the wavelength scatter blue more, but big starch granules scatter all colors alike.

How SuppBuddy Works

You shouldn't need a lab to know what you're consuming
